Live Science probably has a book for you here. Our writers scanned our archives for our favorite science books, those in which storytelling is as convincing as science and history itself, so you don't have to simmer through Amazon peaks or stored shelves.( Image Credit: W. W. Norton & Company Ltd.) Mary Roach is the author of a series of books titled to a word that looks at the strange side of science. "Packing for Mars", published in 2011, breaks the trend of the title, but not the subject. This is a book about the nitty-gritty of traveling among the stars. Is the food disgusting? Where are you going to the bathroom? Have you ever thought of how many skin flakes wash the drainage of the shower every morning and where those dead cells would go if they were floating around, not warming, in zero gravity? Roach digs deeply into NASA's archives and brings to light all the basic biological minutes that tormented the dreams of the pioneers of the space program. In the process, it elucidates the most peculiar challenges of getting humans to the eponymic Red Planet. I hope Elon Musk has been reading. The Big Burn: Teddy Roosevelt and the Fire that Saved America (Timothy Egan)(Image Credit: Houghton Mifflin Harcourt)In 1910, aAcres of Washington, Idaho, and Montana killed 87 people. This conflagration turns out to be the fulcrum on which former President Teddy Roosevelt of conservation turned. Timothy Egan tells the story of Roosevelt and his forestry chief Gifford Pinchot and their efforts to wrangle Western lands into public hands. Half history, half science, this book is anything but dry. Egan picks through the letters and written reminiscences of survivors to describe vividly what it was like to face down the largest wildfire by area in U.S. history. Roosevelt's larger-than-life personality (and tendency to challenge houseguests to wrestling matches) provides plenty of jaw-dropping "wait, he didÁ Awhat?" moments. More urgently, this book is an important primer for anyone trying to understand today's battles over public lands in the West.Related: The science websites that we read every dayThe Demon-Haunted World (Carl Sagan)(Image credit: Random House)While neither as poetic as "Pale Blue Dot" nor as comprehensive as "Cosmos," "The Demon-Haunted World" remains one of Carl Sagan's most compelling books. In it, Sagan explains how to use the scientific method in everyday life, as well as how to protect yourself from charlatanism and expose pseudoscience. The Demon-Haunted World is partly a paean to rational, skeptical thinking, but it also tackles some topical issues, such as how politics can twist science to its own ends, and how conspiracy theories can poison an otherwise reasonable mind. One essay in the book, "The Dragon in My Garage," is possibly the best argument for religious agnosticism ever put on paper. eÁÁÁ Marshall Honorof, Live Science Contributor(Image credit: Houghton Mifflin Harcourt)Most know the story of Sir Isaac Newton: scientist, mathematician and sworn enemy of apple trees everywhere. What fewer people know is the story of Sir Isaac Newton: detective for the British government. In 1699, Newton became the Master of the Mint, and matched his considerable wits against William Chaloner, a charismatic and inventive criminal mastermind. Chaloner was one of the most Co -falsifiers of the 18th century, and the scale of its plan was large enough to snore the entire British empire. "Newton and the Falfeiter" by Thomas Levenson (Houghton Mifflin Harcourt, 2009) is not only a true crime account, but also a fascinating story of economy, currency and currency. "Marshall Honorof, Live Science Confactor of Henrietta's immortal life lacks (Rebecca Skloot) (Crde of the image: random house) In her book, the scientific writer Rebecca Skloot gives life not only a story of some of the cá @ Más important of medicine, but also the life of the owner of those cells, Henrietta lacks, a farmer of African-American tobacco born in Roanoke, Virginia, in 1920. The fault was diagnosed with cervical cancer in cervical 1951; the cells taken from one of their tumors amazed scientists when they reproduced indefinitely in a laboratory dish, according to "Henrietta's immortal life" © Lula did this. Now called Cá @ Lulas Hela after the fault, the con a of the New York Times book, Lisa Margonelli writes: "Skloot tells science with a libil, tracks the racial policy of medicine carefully and tells the lack of the history of the often painful family with grace. The creepy of the Calsa themselves also faces the spiritual plane in which the family has come to understand the continuous presence of their mother in the world. "[Read a Q&A with the author Rebecca Skloot] The spuru catches you and falls to you (Anne Fadiman) (Cry of the image: Farrar, Straus and Giroux) on the surface, "the spurm catches you and falls to you" (Farrar, Straus and Giroux, 2012) are a child with a severe epilepsy whose parents and doctors have contradictory ideas on how to treat it. But it's also the story of a hmong hmong sus arap saviv sarodabucni omoc saguro nasu apsva ed seicepse sahacum y ,soviv sozalpmeer omoc acob al ne necelbatse es ogeul y secep ed saungel nemoc sotis;Árap sodop;Ási sotreiC .orbil led erbmom le acidni ol omoc ,selbirret res nedepu sotis;Árap sol ,ÁS )1002 ,skooB airtA( "xeR etisaraP" ne remmiZ IraC arteumed ol omoc ,etnecnivnoc artucel anu nechae euq ol ,olreac netimrep sel euq sodazilaicepse etnematla sotneimatropmoc y somsinacem sol y ,selamina sol y satnalp sal ed riviverbos arap sotis;Árap sol noranoculoeve euq ne samrof sal oreP ,oibmac a litÁ adan necerfo on etnemlareneg y ,selatrom saicneucesnoc noc seceva a ,oicifeneb oioporj us arap nÁirtifna nu a nenu es sotis;Árap sol ,satinob in saneub in nos on "otis;Árap" arbalap al rop sadarujnoc senoicaicosá sal ,lareneg nE ,skooB airtA ,negami al ed otid@ÁrC( )remmiZ IraC xeR etisaraProtubirtnC CeneicS eViL ,wohC esineD - -á eÁ ,opmeit ut anep al elaV ,recn;Ác ed "aÁfargoib" atse ael y xilteN eugapa ,onof@Álet us eriteR ,otcapmi oredadrev us ed la±Áes anu ,odneyel abtase ol sartneim serailimaf y sogina noc etnemetatsnoc orbil etse ed odnalbah ©Artmoeç eM ,Jartisjamp rirtcse nu se eejrehkUM y etnemalleb netimsart es saivotsh sal ,odagittsevni neib etnemadamertxe :Átse orbil IE ,saivotsh ed nÁicarran al noc acineic al rejet la eibÁerçni ojabart nu ecah eejrehkuM salhráddis , "odasep" amet le rop ragapa ejed es oN ,opmeit ortseun ed sadazilareneg y selbirroh s;ÁM sedademrefne sal ed anu erbos etnatropmi ojabart nu se etsE )renbirçS ,negami al ed otid@ÁrC( )eejrehkuM ahráhdis ( sedademrefne sal sadot ed rodarepme IE ,etmeicap-ocid@Ám nÁicaler al ed sodal sobma ne aÁtápmo royam anu atiseeçm es euq ed odif;Ás osac nu atneserp y sodinU sodatsE sol ne dademrefne al atart es omÁc arolpxe orbil le ,;acid@Ám a Ágoloportna" ed olpeme nu omoc somgla rop odirefeR ,naÁfñoc in nedneitne on euq le ne esnedinuodatse ocid@Ám ametis nu rop ragevan ed otetni us y soaL ed ailimaf Young, to name just a couple of spooky examples. But the very frightening songs of the book serve to highlight the beauty of And Zimmer turns a captivating portrait of survival that highlights the uniqueness of parasitic creatures. Á e Á, - Mindy Weisberger, senior writer of live sciences contains crowds (ed yong) (image of the image: Harper Collins) Many people like to imagine that humans are the dominant species of the earth. But in reality, all the inhabitants of the world, including humans, are formed by their coexistence with billions of microscopic organisms, which occupy all the surfaces of their bodies. Ed Yong deepens these complex associations in "counting crowds" (Ecco, 2016), exploring the fascinating world and frequently strange of microbes, and the alliances they share with each animal species on earth. Yong reveals how scientists hardly begin to discover the many ways in which microbes alter the creatures that inhabit, and vice versa. And as researchers deepen the evolution and genius of microbial life, they discover the established importance of microbes for our bodily and daily health, and how interactions with microbes affect our vulnerability towards disease and They can even affect our behavior. "Mindy Weisberger, Senior Science writer live (Hope Jahren) (Crde of the image: random house) Hope Jahren is a geobiólogo: a scientist who works with plants and earth. It is also a talented narrator, with a Ear for the rhythms of language and an appreciation for the beauty of the green and growing world that surrounds us. That combination makes its memory "Lab Girl" (Knopf, 2016) an exclusively convincing and moving reading, one that deeply investigates its own struggles and challenges as a scient one, and explore the relationships that nourish in the world, despite their resonance. Conflict in their work. Readers who are not With the minutiae of the vegetable biology you will be surprised when learning how full of drama it can be. The probabilities are against the major ¿ I'm gonna go ¿ I'm gonna go ¿ In Molaison's life and years of research spent on his brain thanks to Luke Dittrich, the grandson of the surgeon who performed the wobotomy. Dittrich masterfully fears the history of neurology with the events that led Molaison to his grandfather's operating table. He teaches the reader about the inaccuracies that have plagued neurology for decades, and reveals it in the problems encountered and perpetuated by researchers who studied Molaison's skills after his life-changing surgery. The book is not fiction, but reads almost like a novel. Dittrich's writing is excellent, as it explores the nuances and mysteries of human memory and Molaison's travels, the doctors who studied him and even Dittrich's own family, which has a dark secret of itself over the lobotomies. — Laura Geggel, Live Science WriterA brief history of time (Stephen Hawking) (Image Credit: Random House) Stephen Hawking explains the universe. In this best-seller, the famous physicist breaks down black holes, space and time, the theory of general relativity, and much more, and makes it accessible to those of us who are not rocket scientists. The book is a great print for anyone who wants to learn more about the origins of the universe, and where everything is directed. (Image credit: Harper Collins)"Alex & Me" (Harper, 2008) attracts readers to the incredible world of animal intelligence. In fact, after reading about Alex, the African grey parrot that learns countless words, simple mathematics and the nuances of spoken language, you will never use the insult "birdbrain". The book begins with author Irene M. Pepperberg regretting the loss of Alex, who died at the age of 30 in 2007. The beginning is a bit morbid, but don't let that stop you. After the first chapter, you will literally fly through the book,how pepperberg trained alex to become — most likely — the most intelligent parrot in the world.
